

Histoacryl[®] and Histoacryl[®] LapFix Pack

Atraumatic mesh fixation for
hernia repair surgeries

Histoacryl[®] and Histoacryl[®] LapFix Pack

Atraumatic mesh fixation for hernia repair surgeries

Fixation of hernia meshes, especially in inguinal hernia surgery.

Histoacryl[®] LapFix Pack

Laparoscopic procedures

Histoacryl[®]

Open procedures

The use of Histoacryl® for mesh fixation is...

Atraumatic

- **Stand-alone fixation method** in different hernia repair techniques ¹⁻⁹
- **Rapid polymerization** ¹⁰
- **Atraumatic method** reported to be **better tolerated** by the patient than traditional fixation methods ^{1-6, 8, 9, 11}

Prevent complications

- **Reduced risk of post-operative pain** compared to traditional fixation methods ^{1-6, 8, 11}
- **Faster return to work** compared to traditional fixation methods ^{1, 3, 7, 12}
- **Low or similar intra- and postoperative morbidity** compared to traditional fixation methods ^{1, 3, 6, 8, 11}
- **Lower or similar rate of infections** related to Histoacryl® than other techniques ^{1, 3-5, 11, 13}
- **Similar recurrence rate** than with traditional fixation methods ^{1-8, 11}

Easy to use

- **Decreased surgery time** compared to traditional fixation ^{3-5, 7, 11}
- **Storage** at <22°C ¹⁴

Affordable

- Only necessary to **apply few small drops** to the desired fixing sites ^{10, 15}
- **Lower priced** than tackers, fibrin glue or staples ¹⁶

Histoacryl® LapFix Pack

Laparoscopic device for atraumatic mesh fixation

Histoacryl®
0.5mL ampoule

1
Open the Histoacryl® ampoule by **twisting off the tip**.

2
Histoacryl® transfer to the syringe by inserting the tip into the syringe and **aspirate by pulling the plunger** until the content is transferred.

3
Prime the syringe until there is no air inside to prevent premature solidification at the tip of the syringe.

Histoacryl®
LapFix - Cannula

Syringe Inject®
2mL Luer Lock Solo

Attach the syringe by screwing the Luer lock.

Prime the device until the first drop of Histoacryl® appears in the cannula tip to prevent premature solidification.

Protect the tip of the cannula with the tube and introduce it through the minimum 5 mm trocar.

The fewer the drops the better the integration will be achieved. ¹⁰

Apply few small drops of Histoacryl® to the edges of the mesh. ^{10,15}

If the cannula tip gets block, rub it with a gauze or cut a portion of it with scissors. ¹⁷

Histoacryl[®] LapFix Pack

Clinical evidence and guidelines

Atraumatic mesh fixation methods such as cyanoacrylates are **recommended** by the **International Hernia Society Guidelines**.

“ Cyanoacrylates are **safe** in terms of **recurrence** (1 year) and reduce the risk of **acute postoperative pain**.¹⁸ ”

NICE

advice

“ Cyanoacrylate glue is as **effective** as alternative methods of mesh fixation.¹⁶
Using glue limits trauma to surrounding tissues.¹⁶ ”

Find here the
full guidelines

Atraumatic mesh fixation with glue was **quicker** and resulted in **less acute postoperative pain** than sutures for Lichtenstein hernia repair. ⁴

Mean duration of the operation ⁴

Pain Score at Different Durations ⁴
